

VENUS CYCLE 1900 - 2044

Dates of her Retrograde and Direct stations, and conjunctions with the Sun. All times are GMT. Note that these alternate between Inferior (Interior) and Superior (Exterior) conjunctions. When at Inferior conjunction (Interior, point 1 below), Venus is Retrograde (marked R) and located between the Sun and the Earth; when at Superior conjunction (Exterior, point 6 below), Venus is going Direct (marked D) and the Sun is between Venus and the Earth (so 'exterior' to the Sun from a geocentric viewpoint). See diagram below:

Use this list to 'track' the 8-year cycle of Venus returning to almost exactly the same place in the zodiac, for a similar Retrograde cycle.

- Note especially the first one which occurred in your life as the repeats of this one, every 8 years, will be powerful and significant.
- Read the information on my website to understand the process more deeply.
- Knowing the dates ahead can help you prepare to engage with the process more fruitfully, and also help you understand relationship dynamics.
- If politics and history interest you, this list will enable you to research world events occurring at around these times.
- See the extensive ephemeris on www.astro.com or more detailed information
